THE CONTINUOUS DEVELOPMENT OF INNOVATIVE PRODUCTS AND CONCEPTS THAT FACILITATES THE USE OF *Artemia* IN MARINE FISH AND SHRIMP HATCHERIES

INVE Aquaculture, Benchmark's Advanced Nutrition division, has been enabling growth in aquaculture for 35 years. The healthy growth of fish and shrimp, the growth of our clients' local businesses and the growth of global aquaculture.

A vision on Artemia

A fundamental part of INVE Aquaculture's success in commercializing Artemia cysts has always been the company's vision not to market Artemia as a simple commodity, but to produce cyst products with patented technologies that simplify and optimize the Artemia use and performances.

A reliable supply of consistently high-quality cysts being vital for any hatchery to achieve performant and robust juvenile production, INVE Aquaculture's innovations are always aimed at maximizing output, biosecurity and efficiency in fish and shrimp hatchery operations.

INVE Aquaculture offers a wide and specialized range of top quality Artemia cysts from sustainably harvested sources. INVE Aquaculture's Artemia brands include Great Salt Lake cysts. At Great Salt Lake, the Artemia cysts are carefully harvested and processed as a natural product. The environmental care, respect of stringent laws and focus on sustainable harvesting and management, makes Great Salt Lake Artemia cysts unique and unbeatable as the best and most convenient live feed available in the rearing of top quality shrimp and fish in hatcheries worldwide.

Innovative technologies for the Artemia portfolio

As a culmination of long-standing efforts in revolutionizing the sourcing, characterization, enrichment and ease-of-use of Artemia cysts, INVE Aquaculture now announces the completion of its ultimate set of technologies, that complete the company's Artemia portfolio.

As an addition to the already very successful SEP-*Art* concept, no less than three state-of-the art enhancement technologies will be available for INVE Aquaculture's prime Artemia products and brands.
