

## Le Gouessant Aquaculture

Le Gouessant Cooperative was founded in 1954 and became in 50 years the **true Animal Nutrition Specialist in France**. With **900 000 T** of animal feed manufactured annually in 7 factories, it is a major player of agriculture in Brittany.

Its subsidiary **Le Gouessant Aquaculture** has been a **leading aquaculture company in France**, manufacturing **30 000 T every year**. Our broad knowledge covers feed for broodstock, hatchery, starter and grower stages for salmonids, marine fish, freshwater fish and shrimps.

**Research and Development** projects are carried through external cooperation or in partnership with renowned institutes. They are bound to find rapidly direct application for the benefit of our customers worldwide who are interested by **efficient, healthy, functional and sustainable feeds**. Le Gouessant Aquaculture is currently **leading NINAQUA**, a major national four-year program targeting **100% substitution of fish meal and fish oil** in trout and bass diets with innovative raw materials.

We strongly believe that aquaculture is sustainable only if it can combine performance, quality and preservation of marine resources. All our feed are GMO free and more than half are manufactured **under sustainable standards** (EU Organic, Naturland, Bio Suisse). We are also Friends of the Sea and Global Gap certified.

Experienced nutritionists, skilled veterinarians, passionate engineers and talented technicians are available to **elaborate tailor made solutions** to answer specific demands.

We are now extending this **spirit of cooperation** to independent feed companies who would like to **share our experience and passion** in the formulation, the manufacturing and the marketing of top quality aquafeed, either using our brand or developing theirs for their national or regional markets.
